

A DISK STORAGE CASE FOR A RECORDING MEDIUM  
ABSTRACT OF THE DISCLOSURE

A disk storage case for a recording medium,  
comprising: a case body divided at least into two parts  
5 including a top case part and a bottom case part hinged  
together to assume a double-spread configuration when  
opened; and a holder member provided on the case part for  
gripping disk "D" from a diametric direction thereof,  
wherein said holder member is provided with a groove formed  
10 along an inner peripheral edge of a circular arc thereof  
for fittingly receiving an outer peripheral edge of the  
disk to thereby grip the disk inserted from the opening  
side of the circular arc by the inner peripheral edge  
thereof, and a window section "W" disposed in a front wall  
15 of the case body so as to allow for the disk to be inserted  
therethrough into the groove formed in the holder member  
while keeping the case in its closed state.
